**Sam Tadbir Ayandeh**  
📍 Iran, Tehran

📁 PM & Microsoft Full Stack Developer

📅 Mar 2016 - Mar 2025

In this project, my task is to develop a large system for customer relationship management, with important sections for customer management added to this project

annually, and sections for communication with banks and insurance companies have also been created in the form of APIs and portals.

**Pourapakhsh  
Pharmaceutical  
Distribution Company**  
Iran, Tehran

Head of Software

Dec 2019 - Dec 2020

I started my career with the position of head of software in this company and when I assumed the position of president, the company had many problems in its software department, which can be pointed to the problems of slowness and low quality of the company's controls and issues. But by the time I left the company, these problems had been resolved, and after my departure, the team continued its work.

## ABOUT ME

---

I have been working day and night in the software research and development sector for many years. I have developed many application systems for various companies. In this direction, I believe that technology can reduce dependence on human resources and greatly increase the executive power of companies. I hope that in the future I will be able to design very attractive and useful software for my country and play a small role in the direction of society.
